EXPERIMENT-10 Extraction of EXIF Data from Image Files Using ExifReader

AIM:

To extract and examine Exchangeable Image File Format (EXIF) metadata from image files using ExifReader for digital forensic investigation.

TOOLS REQUIRED:

1. ExifReader (ExifRead.exe)
2. Windows computer
3. Sample JPEG/JPG image
4. Screenshot utility for documentation

PROCEDURE:

Step 1: Download ExifReader

1. Obtain ExifReader from a trusted source.
2. Download the compatible application package.
3. Extract the files if the download is a ZIP archive.

Step 2: Launch ExifReader

1. Open the extracted folder.
2. Run ExifRead.exe if that is the executable supplied with your version.
3. Wait for the application to open.

Step 3: Load an Image

1. Click **Open** in the application.
2. Browse to a sample JPEG/JPG image.
3. Select the image and confirm the selection.
4. Wait for the metadata to load.

Step 4: Examine EXIF Metadata

1. Inspect the available fields, including:
2. Camera manufacturer and model
3. Original date and time
4. Exposure time, aperture, and ISO
5. Focal length and image dimensions
6. GPS coordinates, if present
7. Editing software information

Step 5: Record Findings

1. Note the important metadata fields.
2. Record the image filename and relevant timestamps.
3. Capture screenshots of the metadata results.
4. Save or export the results if the application supports it.

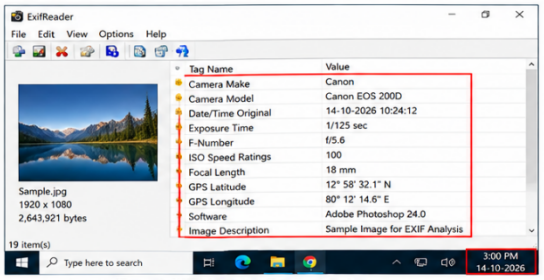

Figure 4: EXIF Metadata Details of the Image

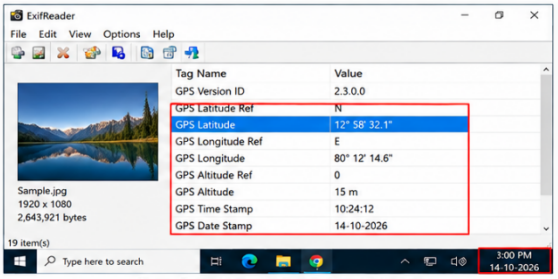

Figure 5: GPS Location Details from EXIF Data

RESULT:

1. The EXIF data was successfully extracted and displayed.
2. Important information such as the image capture time, camera details, and GPS location (if embedded) was retrieved.
3. The data provides valuable forensic evidence about the origin and editing history of the image file.
